

Calendar

Project description

A Calendar based scheduler to keep track of user events and reminder , and a place to add todo list for the day.

phase 1

- view basic calendar as per month and year selection
- highlight current / selected date.
- auto disable days from prev and next month for a particular month.
- make day before current day dull.
- modal creation on click of a day [to show and add events and todo list]
- add events for the day.
- add Todo list for the day.

phase 2

- multiple view options like day view, week view, month view.
- login feature to support multiusers.
- add reminder/ email notifier for events.

phase 3 [optional features / after completion of first 2 phase]

- send notification in same app to different user in real time.
- ability to connect your google calendar
